

INDUSTRY SHEET

Managed IT for Construction Companies

IT support and cybersecurity for Canadian general contractors and trades with 10 to 150 employees, in the office and on the job site.

What we run

- Help desk and 24/7 monitoring across all sites
- Networks for job sites, offices and trailers
- Field crew phones and tablets, managed
- Procore and Sage 300 CRE support
- Subcontractor access controls
- Backups with verified restores

How it is delivered

Fusion covers your daily support, Microsoft 365, security, backups, vendor coordination and multi-site management.

Your office runs ERP and project management. Your crews run on phones and tablets. We support both.

Our security work is CISSP-led and aligned to CIS Controls v8.1. We respond to critical issues within 1 hour.

What it costs

- Fully managed IT starts at \$185 per user per month.
- Co-managed IT starts at \$160 per user per month. The written scope splits support between your IT lead and Fusion.
- Agreements run two or three years as standard; a one-year term is available at a higher rate.
- Assessments are paid work, and each one is scoped separately.
